This information is provided for purchasers of cap analog products C31010, C61025, C06005 (cap analog, methylated; m<sup>7</sup>G[5']ppp5'G Solution and C32010 (cap analog unmethylated G[5]ppp[5']G solution) and cap analog, trimethylated m<sup>2,2,7</sup>[5']Gppp[5']G.

RNA cap analogs are modified nucleotide structures. They are provided as 20 mM solutions in sterile deionized water except for the trimethylated cap analog which is supplied as a powder. These materials are for research use only. The cap analogs are not thought to be hazardous and hence do not require separate MSDSs. Epicentre recommends that standard laboratory precautions be taken whenever working with chemical or biological materials when hazards are not known.

This information is believed to be correct, however, Epicentre makes no guarantee of the accuracy or completeness of the data and shall not be liable for any damages. This document is offered solely as a guide for the customer's consideration, investigation and verification. These suggestions do not replace state, municipal and/or insurance requirements. Any use of this information must be determined by the user to be in accordance with applicable federal, state and local regulations.
