This information is provided for purchasers of the MasterAmp™ High Fidelity Long PCR Kit (MHF9220), MasterAmp™ TAQurate™ Long DNA Polymerase Mix (QU92125, QU92500 and QU9201K) MasterAmp™ High Fidelity 2X Long PCR Premixes 1-9 (MHF925A⇒I) and MasterAmp™ PCR Enhancer.

The kit contains several reagent tubes.

The MasterAmp™ TAQurate™ Long DNA Polymerase mix contains protein isolated from non-hazardous bacteria. The protein presents no known threat to humans or laboratory animals. Each of these protein solutions is supplied in a 50/50 glycerol:H₂O solution containing salts and a detergent. A material safety data sheet for glycerol is available. These materials are for research use only.

The premixes in the kit and the MasterAmp™ PCR Enhancer and premixes sold separate contain dilute aqueous solutions of salts, nucleic acids and/or betaine, none of which are thought to be hazardous and hence do not require separate MSDSs.

The High Fidelity Control Lambda DNA/primers tube contains oligonucleotides not believed to be harmful.
